

## SYMBOL AND OXIDATION NUMBER OF THE MAIN CHEMICAL ELEMENTS

**Symbol:** how we represent the elements of the periodic table. Generally we represent the elements with one capital letter. If we use two letters, then the 2<sup>nd</sup> letter is always written in lower case. Ex: Hydrogen → H ; Nickel → Ni

**Valency (Oxidation number):** the number of electrons lost (positive on.), gained (negative on.), or shared (we assigned the negative on. to the most electronegative element), by an element when it combines with another.
