ACTIVITY FOR PEER ASSESSMENT (mole to mole ratio)

## SAMPLE PROBLEM

Ammonia is made industrially by reacting nitrogen and hydrogen under pressure, at high temperature, and in the presence of a catalyst. The equation is $\mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NH}_{3}$ (g). If 4 mol of $\mathrm{H}_{2}$ react, how many moles of $\mathrm{NH}_{3}$ will be produced?

1) Organise the data clearly:

| ITEMS | DATA |  |
| :--- | :--- | :--- |
| Substance | H 2 | NH 3 |
| Coefficient in balanced <br> equation | 3 | 2 |
| Molar mass | Not needed for this problem | Not needed for this problem |
| Amount | 4.0 mol | X mol |
| Mass of substance | Not needed for this problem | Not needed for this problem |

2) Multiply by the mole ratio of NH 3 to H 2 determined from the coefficients of the balanced equation.
$\mathrm{mol} \mathrm{H} 2 X \frac{2 \mathrm{~mol} \mathrm{NH} 3}{3 \mathrm{~mol} \mathrm{H} 2}=\mathrm{mol} \mathrm{NH} 3$

So: $4 \times(2 / 3)=2.7 \mathrm{~mol}$ of $\mathrm{NH}_{3}$

## TO BE CORRECTED BY A CLASSMATE

1) How many moles of sodium will react with water to produce 4.0 mol of hydrogen in the following reaction?
$2 \mathrm{Na}(\mathrm{s})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{I}) \rightarrow 2 \mathrm{NaOH}(\mathrm{aq})+\mathrm{H}_{2}(\mathrm{~g})$
2) How many moles of lithium chloride will be formed by the reaction od chlorine with 0.046 mol of lithium bromide in the following reaction?
$2 \mathrm{LiBr}(\mathrm{aq})+\mathrm{Cl}_{2} \rightarrow 2 \mathrm{LiCl}(\mathrm{aq})+\mathrm{Br}_{2}(\mathrm{I})$

San Francisco de Paula
3) Aluminium will react with sulfuric acid in the following reaction.
$2 \mathrm{Al}(\mathrm{s})+3 \mathrm{H} 2 \mathrm{SO} 4(\mathrm{I}) \rightarrow \mathrm{Al} 2(\mathrm{SO} 4) 3(\mathrm{aq})+3 \mathrm{H} 2(\mathrm{~g})$
a) How many moles of H 2 SO 4 will react with 18 mol of Al ?
b) How many moles of each product will be produced?
