Revision unit 2

## Physical properties - Which do we use to identify substances?

## Kinetic Molecular Theory

- How does it explain the properties of the different states of matter?

## Change of state

Changes of state happen when you add or take away energy

Complete the diagram

## Gas

## Solid

## Change of state

At these temperaturas, what state are these elements in?
You need to find their melting points and boiling points.

| Element | $\mathbf{0}^{\circ} \mathbf{C}$ | $\mathbf{1 0 0 ^ { \circ }} \mathbf{C}$ | $\mathbf{5 0 0}^{\circ} \mathbf{C}$ |
| :---: | :---: | :---: | :---: |
| Oxygen |  |  |  |
| Sodium |  |  |  |
| Mercury |  |  |  |
| Zinc |  |  |  |
| Gold |  |  |  |

## Gas Laws Practice - Show your calculations

- A 500 mL can of gas is at a pressure of 2atm. It is crushed to a volume of 10 mL . What is the pressure?
- 10 L of gas at $-233^{\circ} \mathrm{C}$ is heated to a volume of 20 L , what is the new temperature, if the pressure stays constant?
- We have a gas with an initial volume of 100 cm 3 at $27 \circ$ C. Calculate its volume at $87^{\circ} \mathrm{C}$ if the pressure is constant. Give your final answer in L .
- A sample of gas has a volume of 20 cm 3 at $127{ }^{\circ} \mathrm{C}$ and 90 kPa . What volume will the gas occupy at 20 kPa and $27^{\circ} \mathrm{C}$ ?

How does this liquid turn to vapour without boiling?
